

Promotional Video

Goal: Students will create a two to three-minute video promoting a place in the united states.

Process

Daniel will be the director/producer he will be responsible for organizing the project and keeping it on track. Ka'Mara and Brielle will be the researchers finding information about the place. Tanner and Luke will find at least three different backgrounds or video that can be used to create the project. Everyone needs to work together to make a quality product. I would suggest using the steps below to help make your project successful.

1. Decide on your place (Brainstorm as a group and find an interesting place)
2. Create a storyboard or an outline of how your video will go (how many scenes will you need?)
The storyboard or outline will also help you know what props you will need to bring.
3. Work together and listen to each other's ideas and EVERYONE needs to participate
4. When you are filming take the it seriously. There is no reason to have to redo a scene more than a couple times.
5. Reflect on what you are doing make sure it is quality work. If needed remove scenes that don't fit the project

I will monitor your progress and make sure everyone is working and the project is going as you have planned it. If you have questions, please let me know. The VeescopeliveFull app has improved so finding backgrounds shouldn't be as difficult, but do make sure the background works properly before you start using it.

We are starting on this depending the day you have class Monday January 24th or Tuesday January 25th and videos will be shown on Tuesday Feb 8th or Wednesday Feb 9th.
