

Keep your children connected to safe and reliable internet.

Kajeet SmartSpots® and Education Broadband™ for Virtual Learning

Your children's virtual learning to your conference calls to your family's health visits – a reliable internet connection is critical for families during COVID-19.

The Kajeet SmartSpot is a portable WiFi hotspot device that **provides your child with safe, education-only Internet access** wherever there is cellular coverage. This frees up your home internet bandwidth and keeps your child on task and able to complete virtual learning.

With the Kajeet SmartSpot,

- ✓ Your child can access the Internet outside the classroom to complete homework.
- ✓ Your child can read online materials, collaborate with classmates, or connect with teachers.
- ✓ Your child will not be able to access any entertainment, adult, or inappropriate content.

What makes Kajeet SmartSpot and Education Broadband different than traditional internet?

The SmartSpot devices are provided by your school for your children to access the Internet for educational purposes only. No private information (such as student name, login information, account numbers, etc.) is collected or retained, however the school will have the capability to track device usage trends such as what sites are visited and data usage.

Families without current broadband Internet connection are eligible for free service!

We encourage you to speak with your school or district technology team for more information about your **Kajeet SmartSpot®** and **Education Broadband™**.
